Research Interests

I am broadly interested in developing *fast*, *efficient* and *robust* algorithms for ***physics-based animation***. I have worked on the following projects.

- Developed *remeshing-free graph-based Finite Element Method* for fracture simulation.
- Proposed *probabilistic damage mechanics* for impurity induced random fracture.
- Built an *interactive framework with haptic feedback* for virtual sculpting.
- Devised an algorithm for *non-linear Monte Carlo ray tracing* using General Relativity.
- Developed a *Smooth Particle Hydrodynamics-based* interactive framework for underwater haptic rendering.

I am also interested in *machine learning algorithms* applied to dynamic physical Systems.
